PROFILE

Data Analyst with 3+ years delivering BI and analytics in an enterprise insurance environment, transitioning into analytics engineering. Strong in dimensional data modeling and in turning business requirements into reliable, well-modeled datasets with SQL, Python, and data warehousing. Trilingual (Spanish, German, English) with a proven record of bridging business and technical teams.

CORE SKILLS

Data Modeling & Warehousing: Dimensional modeling (star schema, fact/dimension tables), layered model architecture (Cognos Framework Manager), data warehousing, IBM DataSphere

SQL & Data: SQL (DBEaver), query optimization, data validation & quality, dbt (foundational), BigQuery

Programming: Python (pandas, NumPy, scikit-learn), VBA

BI & Visualization: IBM Cognos Analytics, Power BI, Tableau, Jupyter Notebooks

Workflow: Git (branches, pull requests, merges), JIRA, ServiceNow, Confluence

Languages: Spanish (native), German (advanced), English (advanced)

PROFESSIONAL EXPERIENCE

INTER Versicherungsgruppe — Mannheim, Germany

10.2023 – Present

Specialist Data Analyst

04.2026 – Present

- Own data models and reporting for four business units, setting modeling standards (star schema, fact/dimension design) for consistent, trusted metrics across stakeholders.
- Lead query and data-model performance optimization; act as the technical bridge between business teams and the Data Warehouse / ETL teams, and drive adoption of Python-based analysis.

Junior Data Analyst

10.2023 – 03.2026

- Built reports, dashboards, and data models in IBM Cognos Analytics, applying dimensional modeling within a three-layer Framework Manager architecture.
- Optimized SQL query logic in DBEaver, cutting load times by up to 50% on high-traffic reports.
- Validated data integrity with the Data Warehouse and ETL teams (IBM DataSphere); supported the migration from Cognos v11.2.4 to v12.0.3 and introduced Python (Jupyter Notebooks).

Operations Business Analyst — Abastible, Santiago, Chile

01.2021 – 05.2022

- Deployed a K-Means customer-segmentation model in Python (scikit-learn) into production, segmenting the bulk-sales portfolio to enable a targeted loyalty campaign for the commercial team.
- Designed KPIs and built Python/SAP production reports supporting management decisions at national scale.

Engineering Intern — Coca-Cola Andina, Santiago, Chile

01.2019 – 02.2019

- Automated a recurring S&OP report in Python, eliminating ~30 minutes of daily manual work and a recurring source of error.

EDUCATION

Diploma in Business Intelligence & Data Science — Universidad de Chile

2021 – 2022

- Full KDD pipeline (selection, preprocessing, transformation, mining, evaluation) with hands-on Python: pandas, NumPy, scikit-learn.

B.Sc. Industrial Engineering — Universidad de los Andes, Chile

2017 – 2021

- Specialization in Operations Management; concentration in Design & Analysis of Algorithms; Python-based thesis (NumPy, pandas, GurobiPy).

CERTIFICATIONS & CONTINUOUS LEARNING

- IBM Cognos Analytics (Reporting, Dashboards, Storytelling, Advanced Report Development); Google Cloud — data & analytics with hands-on SQL in BigQuery; Google AI Essentials.
- DataCamp: 18 courses and 4 hands-on projects in Python, SQL, and data engineering; self-directed Power BI and Tableau.
